

# Challenge

## Concepts review

- In the Index.razor page, let's add a simple menu:

- We can use some of the resources from the default Blazor Example, namely:
  - NavMenu.razor
  - FetchData.razor
- The Home link redirects to Home and FetchData to the route /fetchdata

- We will change FetchData.razor to the following:

Home Fetch data

Id	Name	Description	Date		
1	Card 1	Card 1 description	1/1/2001 9:00:00 AM	<button>View</button>	<button>Remove</button>
2	Card 2	Card 2 description	5/1/2021 12:00:00 PM	<button>View</button>	<button>Remove</button>

Data from cards.json

A remove button to remove a row (in practice we are not removing from JSON file, just from the table)

A view button to call CardDetails.razor
